

limiting phrase "metal structure comprising a metal having a melting temperature above 660°C" of independent claim 7. The Applicants refer to page 4, lines 2-7 where it reads "Then molten aluminum is poured into the mold. However, Lee's method only works for metals having low melting temperatures. Embedding a fiber optic sensor in a metal structure having high melting temperature will decay the fiber, thus damages the sensor."

Accordingly, Applicants respectfully request that the restriction/election requirement be reconsidered and withdrawn and all pending Claims of Group II and Group III be examined.

10

Respectfully submitted,

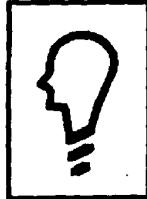

Dr. Ron Jacobs

Sir:

In response to an Office Action mailed on September 10, 2002, and in accordance with
37 CFR 1.143, applicants hereby provisionally elect Group III invention for prosecution on the
merits.

REQUEST TO RECONSIDER UNDER 37 CFR 1.143

Applicants hereby respectfully traverse the election/restriction requirement. The
Applicants hold that Claims of Group II and Group III are not distinct since the products as
claimed in Group III cannot be made by another and materially different process as the process
claimed in Group II. Particularly, the products claimed in Group III cannot be made by metal
molding as is exemplarily cited by the Examiner. In that context the Applicants refer to the

09/597,966 (S00-042)
